Here's How To Set Up Facial Recognition In 5 Easy Steps
For Personalized Photos:

In the app, go to the **More** screen,
select **My Campers**:

Step 1:

Read instructions and privacy information, then check the box to agree.

Step 2:

Select your camper and tap **Add Photo**
If the camera is black you need to go to the Settings app on your phone, find our app and edit the settings to allow camera access.

Step 3:

Zoom the camera to make your camper's face the same size as the oval. (**see [Photo Guidelines](#) below for more info)

Step 4:

Take 2 or 3 photos to increase accuracy of the facial recognition technology.

Step 5:

Photos are automatically saved. You do not need to press the Save button.

**Photo Guidelines

When uploading photos of your campers for facial recognition, please follow these guidelines:

- Include a photo where the camper has a straight face.
- Do not include photos of campers making funny faces.
- For campers with long hair, include a photo with their hair tied and one with their hair loose.
- Remove glasses and hats.
- Make sure there is nobody else in the camera frame.
- Make sure there is enough light.

PLEASE NOTE:

We want to make sure you do not miss any photos of your camper so the fidelity gauge with our facial recognition system will allow for a small level of "overmatching".

As a result, there may be some mismatched photos saved to your camper's album. Thank you for your understanding.
